

Advanced Email Security.

Cutting edge threat prevention for the modern enterprise

Highlights.

Real-time prevention

Block malicious content before it ever reaches the end user.

X-ray visibility

“X-ray” any code executed by the system for 100% visibility into malicious intent.

Deep scanning

Unpack files and follow URLs to detect evasive malicious intent.

Zero delay

In-line engines work in a matter of seconds.

One-click deployment

Easy and fast deployment on the cloud. No change to existing processes.

Unlimited scale

Scan 100% of email traffic, regardless of volume.

Email services

Office 365, Gmail, any cloud email service, Exchange.

Privacy & compliance

SOC2 compliant. No data stored on servers.

24/7 Threat response

Expert intelligence team continuously monitoring incidents.

The Urgent Need For Next Gen Email Security.

Email is the source of 91% of targeted attacks and despite there being many existing email solutions, most companies remain highly exposed. On one hand, sophisticated hackers are continuously innovating and can now evade AVs, Sandbox and CDR technologies.

On the other, multiple deployments have resulted in a chaos of solutions driving increased costs, complexity, and delays. There is an urgent need for next gen technology that is far more effective against the full threat landscape, while also being aligned to the modern cloud enterprise.

OUR SOLUTION:

Faster Interception + Holistic Protection.

Our Advanced Email Security combines cutting edge threat prevention with the speed, scale and flexibility of the cloud. We've built in multiple scanning engines and threat intelligence for enhanced protection against attacks like phishing, spam, commodity malware and BEC.

For advanced threats, we've invented **cutting edge technology that combines hardware visibility with software agility** to see what leading solutions miss. Proprietary software algorithms x-ray code at the CPU-level to intercept attacks at the earliest stage possible - the exploit - before malware is even delivered.

Our cyber security as a service deploys in a single click, analyzes in seconds and has limitless scale to always scan 100% of your traffic.

Zero Day, N-day, & Everyday Threat Coverage.

Our platform protects your business from the full range of attacks

Everyday Threats

Signature-based +
Payload less attacks

Spam, Phishing,
Commodity Malware,
BEC

N-day Threats

Masked attacks &
unpatched software

Exploits leveraging
known vulnerabilities.
Altered signatures
prevents detection.

Zero-day Threats

Unknown
vulnerabilities

Exploits leveraging
unknown
vulnerabilities in
Office, Adobe and
browsers.

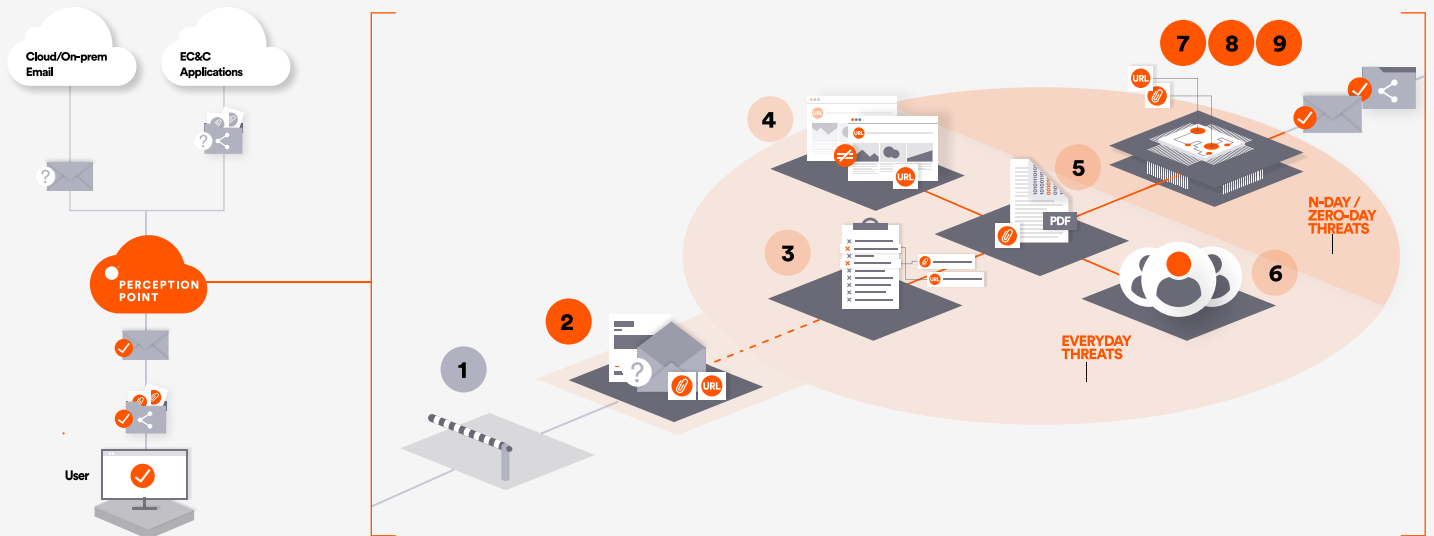

Customer Quote

*“Integrating Perception Point’s platform into our Office365 was quick and seamless with absolutely no impact to our email service levels. **In less than a month they’ve already blocked a potentially damaging attack** that could have easily tricked our users and caused a serious disruption. It’s rare that I see immediate returns that quickly.”*

CISO, Healthcare

Inherent Layered Solution

Enhanced standard layers + cutting-edge APT protection for the most high-performance defense on the market.

EVERYDAY THREATS | Phishing, Malware, Impersonation, BEC, etc.

- 1 Spam Filter (Email Only).** Receives the email and applies reputation and anti-spam filters to quickly flag an email as malicious.
- 2 Recursive Unpacker.** Unpacks the content into smaller units (files and URLs) to identify hidden malicious attacks. Further extracts embedded URLs and files (recursively) by unpacking files and following URLs. All of the extracted components go separately through the next security layers.
- 3 Threat Intelligence.** Combines multiple threat intelligence sources with our internally developed engine that scans URLs and files in the wild to warn about potential or current attacks.
- 4 Phishing Engines.** Combines best-in-class URL reputation engines and an in-house image analysis engine to identify impersonation techniques and phishing attacks.
- 5 Static Signatures.** Combines best-in-class signature based anti-virus engines to identify malicious attacks. In addition, we've developed a tool that acts to identify highly complicated signatures.
- 6 BEC** Prevention of payload-less attacks including spoofing, look-alike domain and display name deception.

N-DAY/ ZERO-DAY THREATS

First Hardware-Assisted Platform (HAPT™)

Unique CPU-level technology acts earlier in the kill chain than any other solution. Blocking attacks at the exploit phase - pre-malware release - for true APT prevention.

- 7 HAPT™ (Dropper).** Employs advanced heuristics-based engine for detecting logical bugs and handling macros and scripts.
- 8 HAPT™ (CFG).** Records the CPU while it processes the input (files and URLs) and identifies exploits by examining the entire execution flow - detecting any deviation from the normal flow of a program in order to deterministically identify malicious activity.
- 9 HAPT™ (FFG).** Detects advanced techniques such as exploits that are written to bypass common CFI algorithms. Proprietary semantic aware control flow graphs developed for each application identify deviations of the execution flow during runtime.
